I understand that this is a simple time line to record events that took place in Mossville. I'm glad we have it. I'm just saying that the timeline has tests/studies listed and then further down it has results listed. I think a chart like I proposed would be clearer. I didn't say the chronology was intended for the RA; however, if the RA or higher wanted to see it; the chart would be very helpful and clearer. I can see Mossville probably getting more attention and a chart like the one I'm asking for would be very helpful in clarifying the testing and respective results. This would be in addition to the timeline that already exists.

Joy,

This is a simple time line to record events that took place in/ or with the Mossville Community. It was never intended to list all the results of each and every study done in Mossville, or to be used on a report to the RA on results. I can change it to reflect what you are looking for, but as I said it will take some time to go back over; many of the studies were done more then one time, (Is this what you mean by ALL OVER). The Community never has accepted the end result of these studies because they did not result in their quest for relocation, free health care for life, and a free clinic solely for the residents of Mossville. The Community also did not list on the NPL.

I think the answers might be within the long chronology. It is just that it is *all* over that chronology and the study names aren't consistent which makes it very confusing for anyone reading it to align what results go with what study. If this were to go to the RA, they couldn't figure it out.

Mossville---I will work on the answers to these questions. It is going to take quite a bit of research to find all the documents and summarize the results. I'm not sure how quickly I will be able to finish this.

Devil's Swamp-----I really need to go meet with Rosemary and the TAG. The results of the study have been delayed because we have not been able to catch crawfish. Clean Harbors has placed new traps and will be replacing and checking them on a continual basis until we can catch them. The prime season is March and April but we hope to catch some before that.

Hi Bill,

I had a bunch of questions on the document. I have a feeling we'll be asked for this. I think the following would help to ease some the confusion if someone had to look at this cold.

I do like the chronology, maybe with just a quick sentence at the end stating something like (results from this testing later showed "x"). Also, it would also help to be consistent with the names for the various testings that were done, so that it is easier to follow. Finally, I think that a separate chart (in addition to the chronology) could give an easier snapshot of testing/date (with consistent names of testing), contaminant tested, where it was tested, and results of test.. p.s. Once this part is done. I'll be asking Rita to add on her part. I

**Example:**

Study Name	Agency	Area of Study	Contaminant	Results of this Study
Exposure Investigation, 12/1998	Agency for Toxic Substances and Disease Registry (ATSDR)	sampling of blood from 28 individuals in Calcasieu Parish (Mossville)	Dioxin	What were the results of <i>this</i> study? The chronology shows that in May of 1999 a Fact sheet was sent to residents with the results of the Mossville Exposure Investigation.
<u>Superfund Investigation</u> 1999-2001  (sounds like it was a joint enf/SF initiative?)  <u>Compliance Inspections</u> of Major Facilities, public water & industrial facilities 1999-2001	Environmental Protection Agency (EPA) other agencies?	"included" Bayou Verdine and Bayou d'Inde, which are close to the Mossville area  (did it include Mossville?)  Same area? for compliance inspections?	????	<u>Superfund Investigation results:</u> ????  <u>Compliance Inspection results:</u> ????

This is the most current and includes most everything I was involved with. Anything that Rita has done would need to be added.
